

Anonymous Bilingual Policy Summarization Dataset

This dataset is a bilingual collection designed for research on automatic summarization of structured public documents.

It supports both monolingual and cross-lingual summarization tasks and includes a mixture of textual documents and multimedia-based policy communications.

The dataset is intended for research in natural language processing, including document summarization, multilingual alignment, and structured information extraction.

Dataset Structure

```
├── Documents/      # 1,300+ pre-processed official documents
├── dataset.csv      # Text summarization dataset
├── videos.csv       # Metadata and transcripts for related communications
└── README.md
```

dataset.csv (Text Summarization Data)

This file contains multi-stage summarization outputs for each document:

- **File Name:** Anonymized document identifier
- **Model Output 1:** Initial summary generated by a large language model
- **Model Output 2:** Refined summary produced by a second-stage model after human review
- **Vietnamese Summary:** Final human-verified summary in Vietnamese
- **English Summary:** Machine-translated version of the Vietnamese summary, followed by manual verification for consistency and meaning preservation

Dataset Statistics

- Number of documents: 1,300+ official texts
- Number of videos: 100+ communications
- Language coverage: Vietnamese and English
- Human verification: Final summaries reviewed for quality and consistency

Data Construction Pipeline

The dataset is constructed using a multi-stage processing pipeline:

1. Raw document collection and extraction
2. Automatic summarization using large-scale language models
3. Secondary refinement using an additional model
4. Human review and correction of outputs

5. Machine translation for cross-lingual alignment
 6. Final manual verification of translated content
-

Usage Notes

This dataset is released for research purposes only.

It is intended for studying:

- Text summarization
- Cross-lingual document understanding
- Structured information extraction
- Multimodal policy communication analysis

No sensitive or personally identifiable information is included in this dataset.

Anonymization Notice

All potentially identifying information has been removed or generalized to ensure compliance with double-blind review requirements.
